An Overview of loT Readiness Assessment Methods

Dejan Arsenijević¹, Stevan Stankovski², Gordana Ostojić², Igor Baranovski² and Dragana Oros²

1 – Student Center Novi Sad
 2 – Faculty of Technical Sciences, University of Novi Sad

IoT implementation obstacles

- In May, 2017 Cisco's survey: "close to 75% of IoT projects are failing"
- HCL Global Systems' "Global IoT Report 2017": 6
 out of 10 surveyed are in early phases of
 exploration and defining IoT strategy
- IoT disruptive, ubiquitous, new business models, technologically complex and advanced
- IoT implementation missing standards and best practices concerning implementation

IoT Readiness Assessment

- Readiness assessment methods or Maturity models structured way of introducing changes relating: strategy – desired position, current position and gap between them.
- IoT Readiness assessment is subject of intererst for: consulting companies (TDWI, Gartner, McKinsey etc.), IoT equipment manufacturing companies (Intel, IBM, Cisco etc.), professional committies and academic institutions.
- Methodology narrative literature review due to small number of results that satisfied searched criterion and are well documented and public.
- Selected methods.

Gartner's IoT Maturity Assessment

•Identify Your IoT Readiness by Performing an IoT Maturity Assessment

• Refine the Vision Component Iteratively

- Assess Where You Need to Be
- Invest in Ideation to
 Further Develop the IoT
 Vision
- Produce an IoT Roadmap Based on Your Current IoT Maturity and Vision

•Ensure the IoT Strategy st Work Is Part of a Digital Business Strategy Initiative 00

Axeda's Connected Product Maturity Model

| 🔅 INNOVA | TE | | | | Reinvent the Product |
|-------------|-----------|-------------|-------------|-----------|-------------------------|
| | | | | Integrate | Experience |
| | | | Analyze | LEVEL 5 | VALU |
| | | Service | LEVEL 4 | | DIFFERENTIATED |
| LEVEL 1 | LEVEL 2 | - LEVEL 3 | INTELLIGENT | OPTIMIZED | DITEICHTRIED |
| | 1000000 | SERVICEABLE | | | |
| UNCONNECTED | CONNECTED | | | | |

Description, Requirements and Implementation are given for each level.

TDWI Readiness Model for IoT

| Dimensions | Organizational | Data Readiness | Infrastructure | Analitycs | IT, Dev. & Op. |
|--------------------|-------------------|-----------------|----------------|------------------|------------------|
| | Readiness | | Readiness | Readiness | Readiness |
| Metrics quantified | Business use | IoT data | Architecture | Team expertise | Business process |
| by responses to | cases | production | | | change |
| the questionnaire | | | | | |
| | Leadership | Data properties | IoT network | Data integration | Team experience |
| | | | technologies | | |
| | Strategy | Data | Data quality | Embeded and | Team readiness |
| | (business models, | understanding | | actionable | |
| | processes) | | | | |
| | | | | | |
| | Culture | Data | Storage | Delivery and | |
| | | manegement | technologies | deployment | |
| | Governance | Data sources | Security | Techniques | |

At the end of the assessment, the Readiness Assessment Tool displays your scores per dimension (out of 20) and overall score (out of 100), plus the average dimensional and overall scores of all respondents. That way, you have a context for determining whether your organization is ahead of or behind the curve. You will also see the average for your industry and company size.

Interpretation of IoT Readiness Scores are given after assessment.

BSQUARE's Five Stages of Iot Five Stages of IoT

Enhancing On-Board Intelligence

Provides maximum ROI and business benefit from predictive failure, data-driven diagnostics, and device optimization.

Automation

Orchestrates automated, complex actions from equipment to inventory, support, service ticketing, and other systems to enable condition-based maintenance and better device utilization.

Delivers insight, predictions and optimization using many different types and formats of data. Reduces unnecessary false positives by an average of 25%.

Real-Time Monitoring

Device Connectivity

& Data Forwarding

and action.

Sensor data is transmitted and stored for analysis

business goals evolve. This maturity model illustrates the stages of IoT maturity and a snapshot of benefits gained along the way. Starting with a sound IoT strategy. companies can achieve maximum value upon completion of all five steps.

IoT is a maturity progression

as an industrial organization's

Start

Schumacher's Industry 4.0 Maturity Model

| Dimension | Exemplary maturity item |
|------------|--|
| Strategy | Implementation I4.0 roadmap, Available resources for realization, Adaption of business |
| | models, |
| Leadership | Willingness of leaders, Management competences and methods, Existence of central |
| | coordination for I40, |
| Customers | Utilization of customer data, Digitalization of sales/services, Costumer's Digital media |
| | competence, |
| Products | Individualization of products, Digitalization of products, Product integration into other |
| | systems, |
| Operations | Decentralization of processes, Modelling and simulation, Interdisciplinary, interdepartmental |
| | collaboration, |
| Culture | Knowledge sharing, Open-innovation and cross company collaboration, Value of ICT in |
| | company, |
| People | ICT competences of employees, openness of employees to new technology, autonomy of |
| | employees, |
| Governance | Labour regulations for I40, Suitability of technological standards, Protection of intellectual |
| | property, |
| Technology | Existence of modern ICT, Utilization of mobile devices, Utilization of machine-to-machine |
| | communication, |

Measurement of maturing items in enterprise via questionnaire

Calculation of maturity level in nine dimensions software supported

Representation and visualization of maturity via maturity report and radar charts

Conclusion

- Significant obstacles in IoT project implementation
- IoT readiness assessment methods provide a structured IoT implementation approach
- The methods diversity confuses potential users
- Standard for an Architectural Framework for the Internet of Things conducted by Institute of Electrical and Electronics Engineers (IEEE) – expected in following years
