IFAC – TC 5.3 Enterprise Integration and
Networking

8th International Conference on Information
Society and Technology, Kopaonik, Serbia

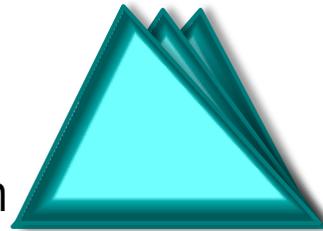

FROM RESEARCH TO PRODUCTION

Organisational Semiotics

- Using approach of Charles S. Peirce

Sense made of sign
/ Interpretant

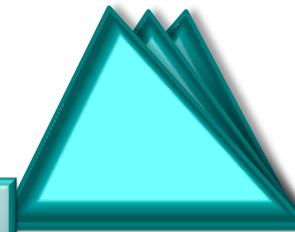

Form of the Sign
/ Representamen

Referent
/ Object

- * Dad
- * Husband
- * Teacher
- * Researcher
- * Team leader ...

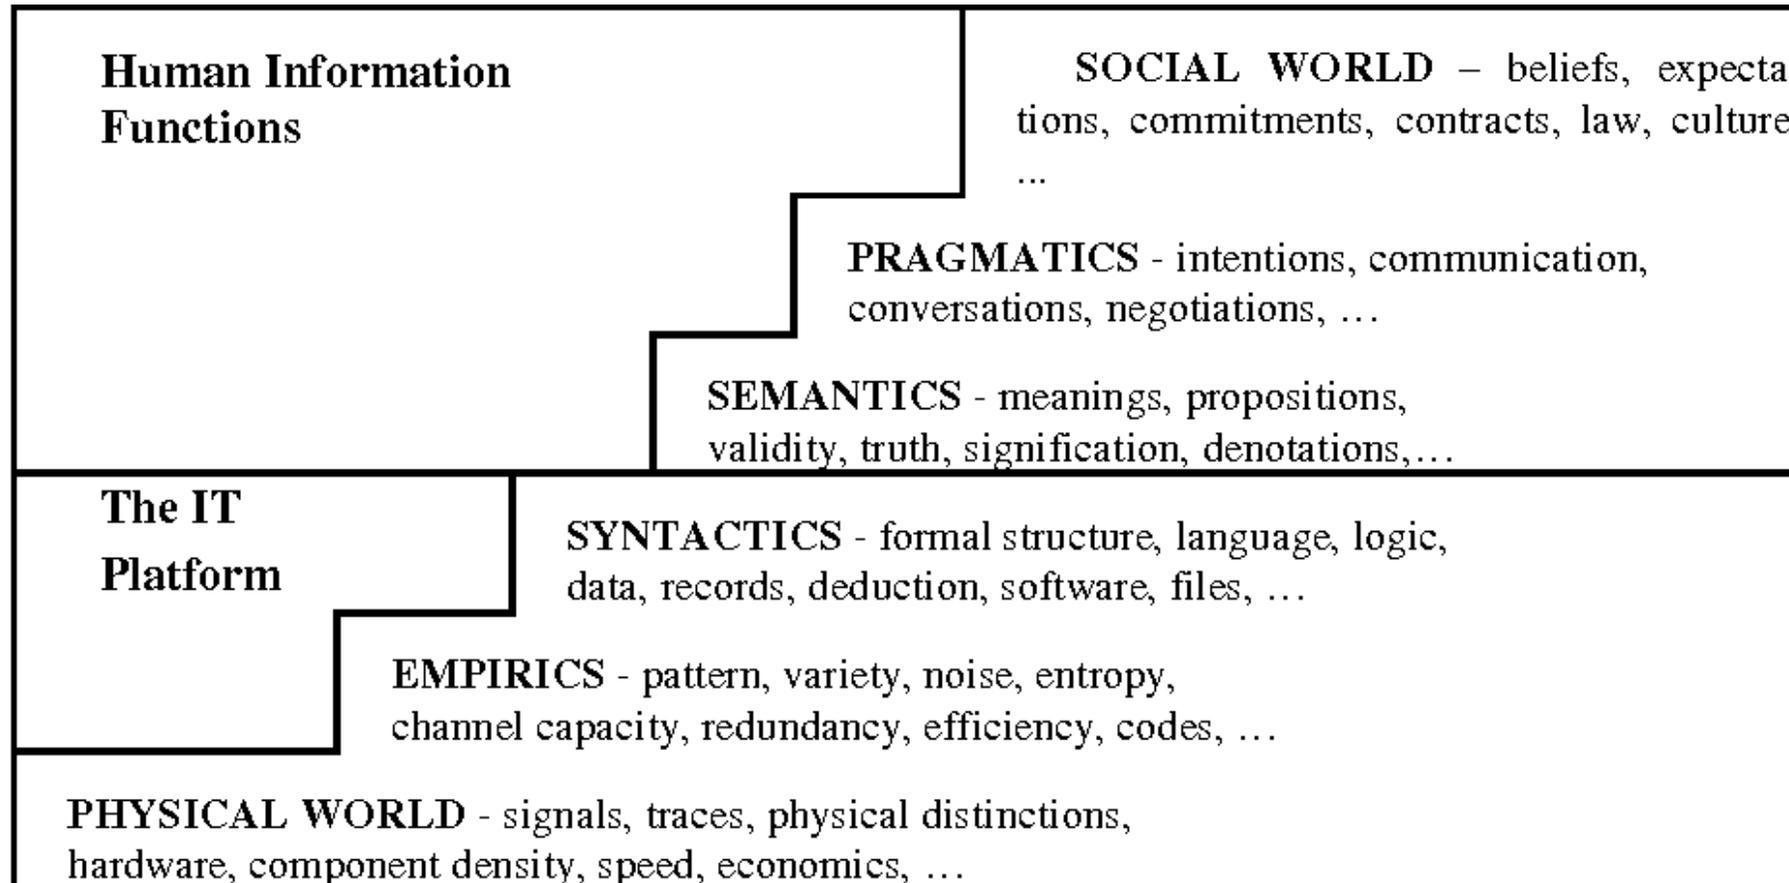

Georg

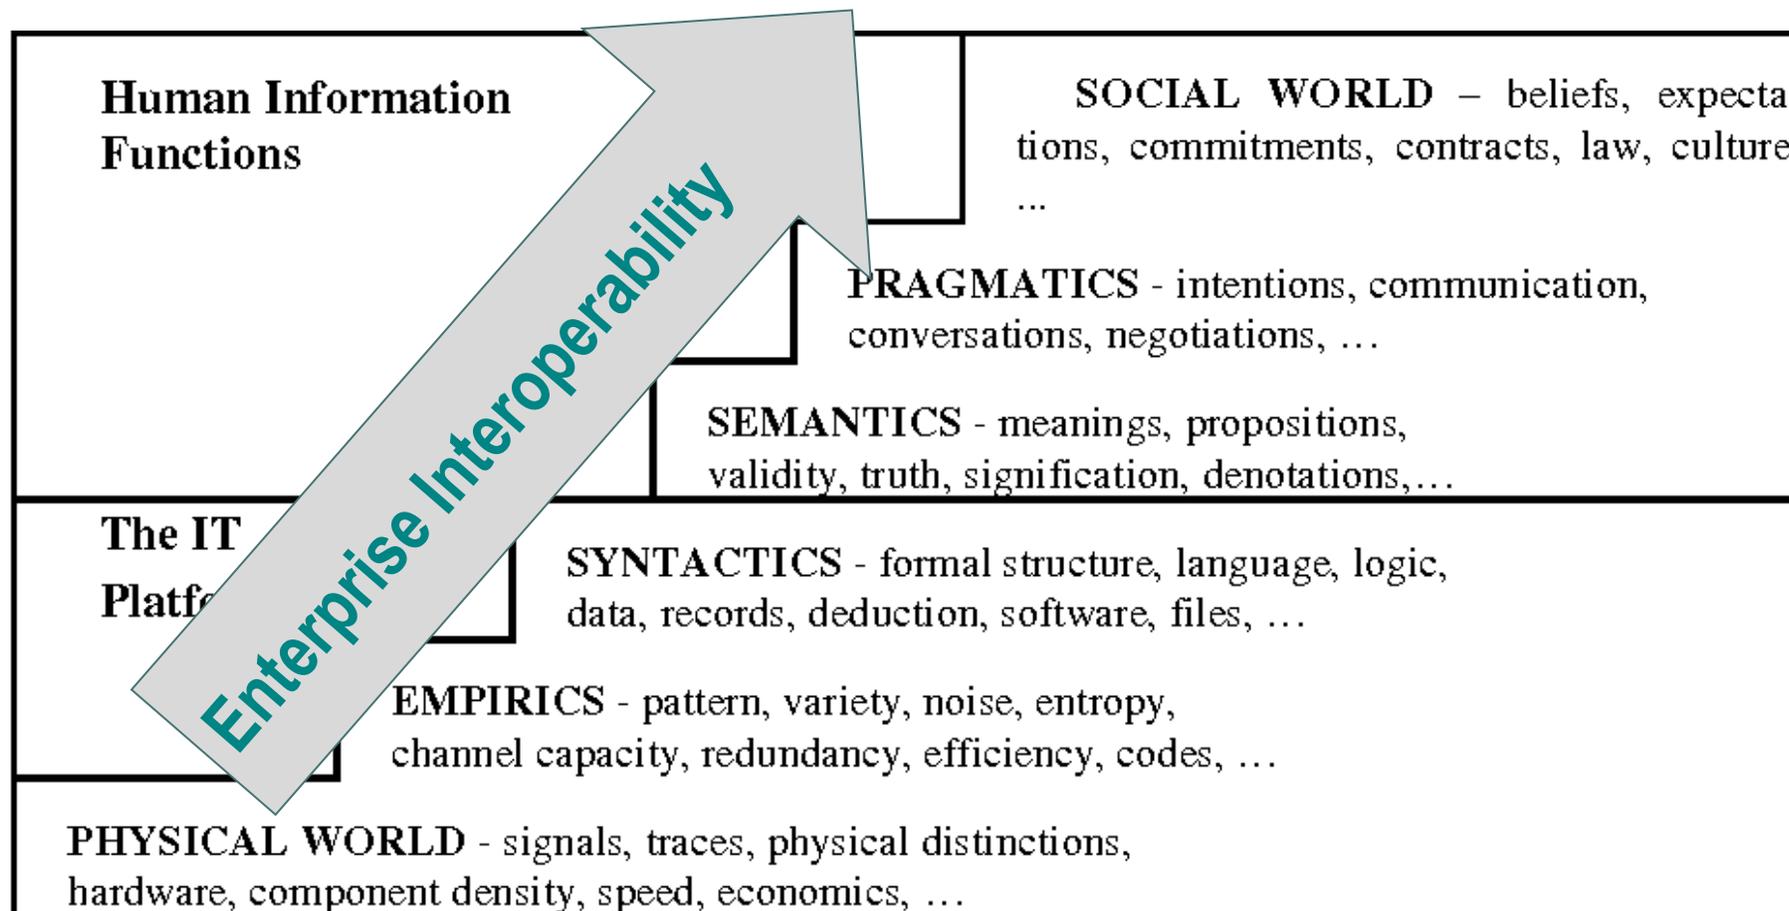

- For the remaining presentation
- The sign is a model
- A model includes signs

Organisational Semiotics

Ronald Stamper's Semiotic Ladder

Organisational Semiotics

Physical World

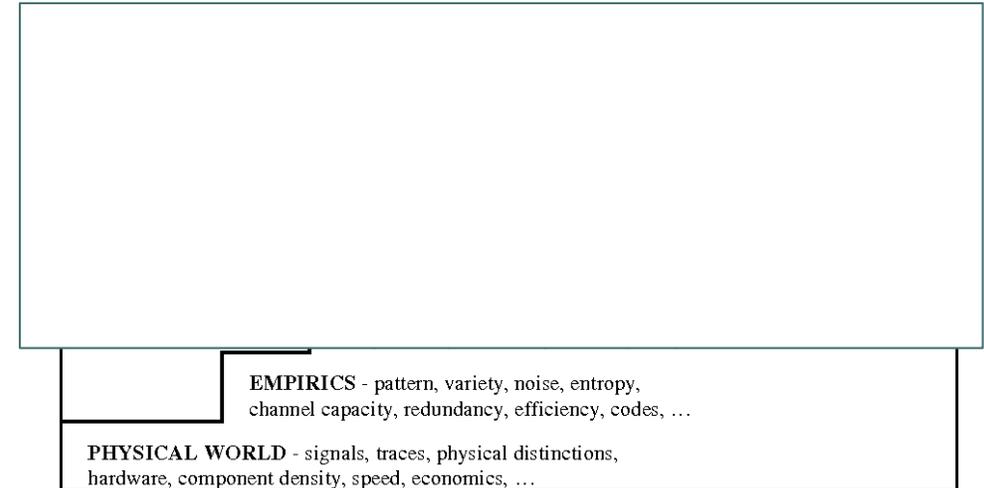

- Workers, Machines, Tools, Production Resources
- Product Types (what kind of product)
- Product Instances (concrete entity)

- All connected through a production process
- Physically connected

PHYSICAL WORLD - signals, traces, physical distinctions,
hardware, component density, speed, economics, ...

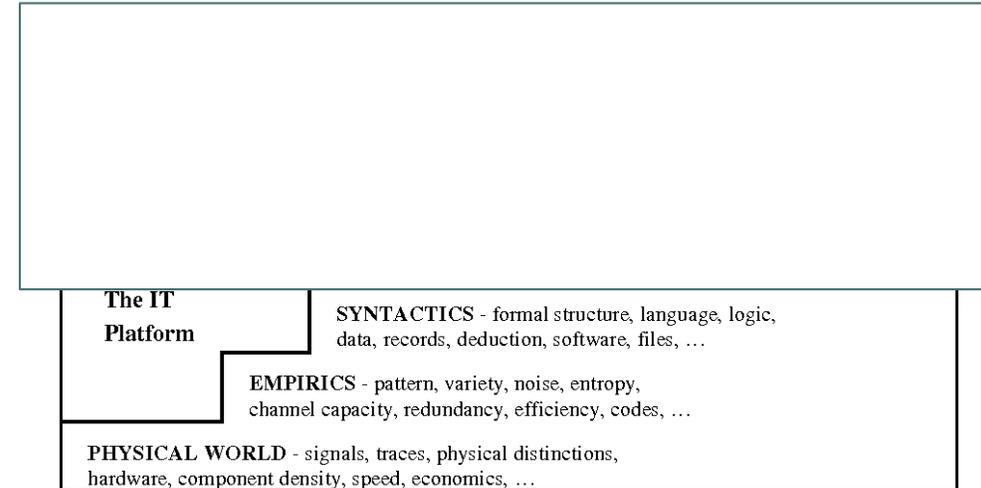

Empirics

- What is relevant to be considered?
- What concepts do we model?
- What attribute of the concepts do we model?

Syntactics

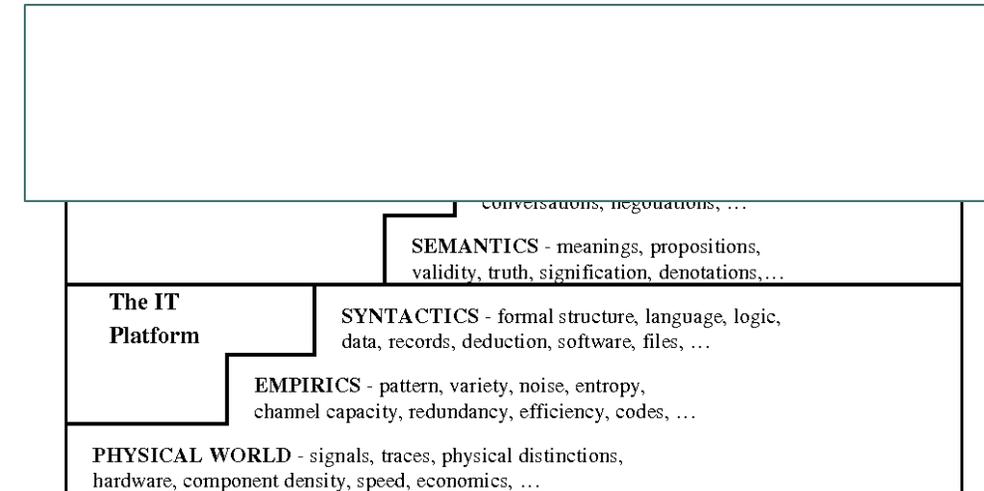

- Formal Logic
- **Data Structures**
- Interaction Protocols

- A lot going on in the Industry 4.0 area:
- Interoperability through technical Standards
 - OPC UA (Machine Interfaces); MQTT, ... (Protocols & Message Queues)
- Provide a link to the machines and their states

Semantics

- Define Meaning (Information)
- Make clear what real world object an id refers to
- Formal definitions of concepts to avoid ambiguity
- Documenting the meaning of syntactic structures (e.g. Temperature in C)
- Interoperability through a common level of abstraction and / or a common reference
 - Ontologies
 - Standards emerging in the Industry 4.0 domain

Pragmatics

➤ Something should happen / has happened in the real world

➤ Process models

➤ Business Process Modelling Notation (BPMN)

➤ Modelling the behaviour

➤ Manual integration of tasks of different roles
- single point of view

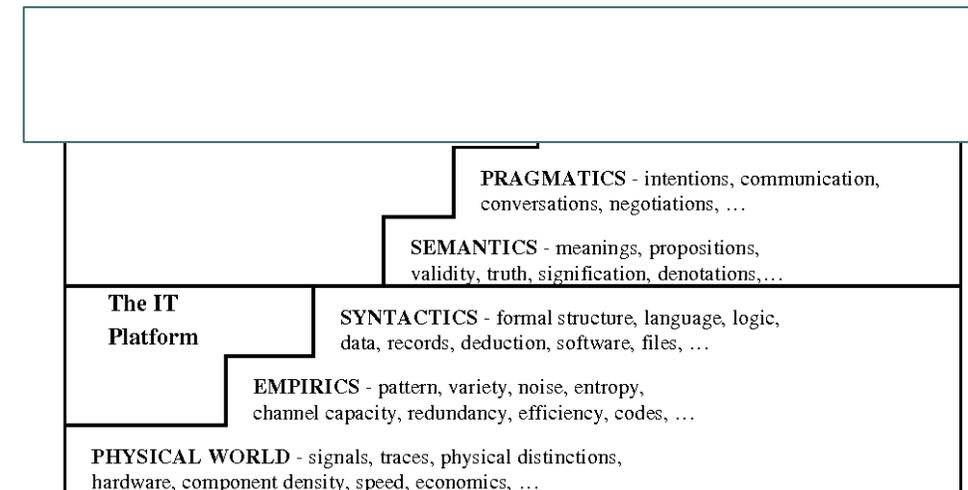

➤ Integration of “Hardware” through e.g. OPC UA

➤ Bridge between business world and shop floor

➤ Bridge between manual and automated execution

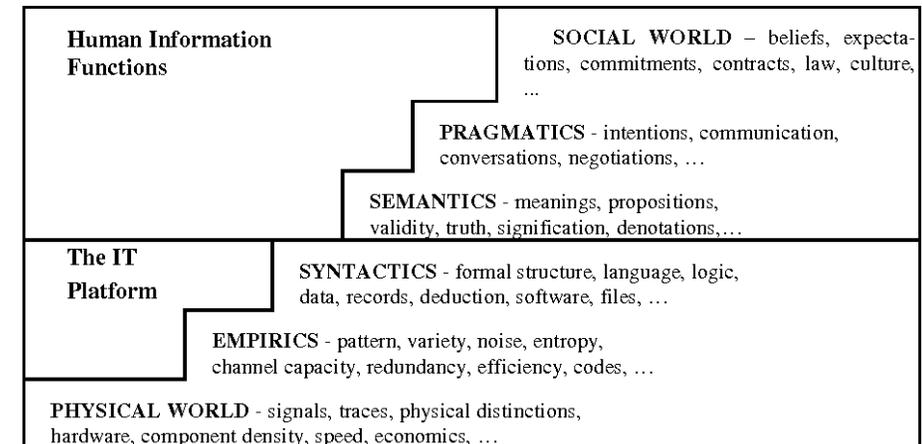

➤ Interoperability – in the sense of loosely coupled systems (or system-of-systems)

➤ Subject-Oriented Business Process Management – to some extend ...

Social World

- Knowledge is not a static artefact but generated through the interaction of people
- Knowledge evolves
- Integration :- (
 - Single point of view
 - Interconnected requires to change a lot
- Interoperability :-)
 - Multiple models
 - Multiple points of view
 - Loosely coupled system-of-systems
 - Model and Knowledge Management required

Georg Weichhart

EI2N 2018

➤ 13th **OTM / IFAC / IFIP** International Workshop on **Enterprise Integration, Interoperability and Networking**

➤ <http://otmconferences.org/index.php/workshops/ei2n-2018>

➤ Abstract Submission Deadline: July 3rd

➤ Full Paper Submission Deadline: July 10th
